

MBPEB DEMOLDING

Developed to attend the thermoplastic segment via the injection molding process of polymer-based polyethylene and polypropylene parts, aiming at assisting the extraction process of the parts in the mold.

The product **MBPEB DEMOLDING** is a concentrate of additives with excellent lubricating power and low friction coefficient, which can help our customers have better productivity in parts that are difficult to extract.

Application

Injection

Characteristics

- Recommended application 2% minimum
- Easy-to-handle product
- Supplied in granule form

Advantages

- Good Processibility
- Avoids the formation of stains
- Increased production capacity
- Promotes protection of the mold

- ✓ High-tech laboratory
- ✓ Specialized technical department
- ✓ Quality control of finished products
- ✓ Logistics with 24 hours service
