

KARINBREATH®

Developed to meet the requirements of the breathable films segment (breathable polyethylene films) and other applications.

We recently launched the **Karinbreath**® line that was developed to meet the requirements of the breathable films segment and other applications.

Compound developed with a high concentration of suitable natural calcium carbonate, with specific surface treatment, narrow particle distribution, high mechanical property polyethylene resin, making it possible to obtain a stable end product within the technical characteristics required by the segment.

Applications

- Films for personal hygiene use (disposable diapers for children and elderly)
- Feminine hygiene products
- Nonwoven Lamination
- Industrial protective clothing

Advantages

- Excellent degree of dispersion
- Excellent thermal stability
- Mechanical property
- Proper film breathability property
- High opacity

Processes

- Extrusion

- ✓ High-tech laboratory
- ✓ Specialized technical department
- ✓ Quality control of finished products
- ✓ Logistics with 24-hour service
