

# KARINPRENE SOFT

*Grade of elastomers developed to meet technical parts of extremely low hardness, translucent material suitable for injection, gel-type extrusion and blends.*

The **Karinprene Soft** brand is a premium elastomer, developed to meet various segments that require in their applications a translucent, delicate, soft touch finish, sensitive to the tactile aspect that comes as close as possible to human skin..

Very well accepted in the production of products where soft tactile is important, it is also widely used in the finishing of household appliances, household utensils and promotional gifts. **Karinprene Soft** is marketed in a 15kg bucket, it is a USP oil mixture that takes an **ATOXIC** material. Ideal product for processing through spillage
